

Strategic. Efficient. Focused.

Power Workshop Production Optimization
Concrete strategies for immediate implementation

Power Workshop Production Optimization

Concrete strategies for immediate implementation

Continuous growth and changes in objectives and framework conditions are usually accompanied by the further development of defined structures. The Power Workshop Production Optimization is a strategic roadmap for further developing your organization and your internal structures. On site, we work together to develop an action plan – naturally adapted to your

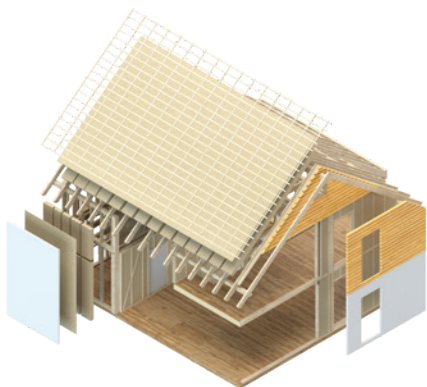

company objectives, processes, production and organization. The aim is to identify potential for increasing efficiency and performance. The conceptual study provides you with the basis for making decisions in a targeted manner, initiating the appropriate measures and aligning your company in the long term in a way that works perfectly.

YOUR BENEFITS

- Individual, strategic concept as a roadmap for future decisions
- Confidence in decision making, since subsequent decisions are based on transparent insights and facts
- Specific optimization suggestions for immediate implementation
- Proposals for long-term development of the company

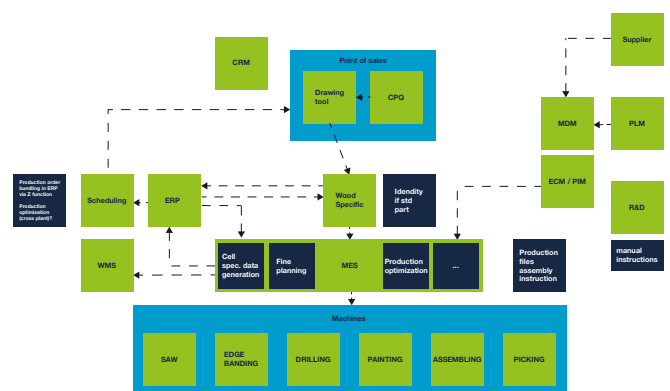

Which material flow guarantees the shortest route and the most efficient production?

How can design details be simplified or cleaned up? Is it possible to design components in a modular way?
Source: Hanjo Kreyer

OUR FOCUS

- **Products:** How can design details be simplified or cleaned up? Is it possible to design components in a modular way?
- **Production principle:** Does order-based production in batch size 1 match the order structure? Or does it make sense to produce parts for intermediate storage? What changes should be introduced?
- **Material flow and machine positioning:** How can parts and order batches flow through production even more efficiently in the future?
- **Logistics in production:** Which transport methods will be suitable for unprocessed parts, components and auxiliary materials?
- **Organization:** How can we ensure that information flows correctly and accurately from receipt of order to construction sites, even in the face of change?

All relevant information flows from receipt of order to dispatch thanks to the data flow organization.
